

Dynamic *Inspection* Limited Setting a new standard in metal detection

The new **extra high sensitivity Fortress Metal Detector** manufactured in New Zealand by Dynamic *Inspection* is easily capable of detecting 1.5mm ferrous, 2.0mm non ferrous and 2.0mm stainless (Grade T316) in the cross sectional centre (point of least sensitivity) of a 350mm high aperture with product present. Suitable for typical powder, grain, sugar and rice applications. A new standard has been set for the food industry. Many references available on request.

Standard features include:

- Multi product memory
- Single key product calibration
- Auto product compensation
- Signal strength display
- Polarised signal display
- Auto vibration compensation
- Programmable password protection
- Power supply auto voltage select
- Power supply short circuit protection
- RS-485 communication
- Flash memory, no batteries
- Programmable auto test
- Reject confirmation
- I/O Ports
- CE/EMC Compliant

Fortress Technology Phantom DSP Metal Detector

Manufactured in New Zealand by **Dynamic Inspection Limited** who combine modules imported from Fortress Technology Inc. with a New Zealand designed and manufactured search head guarantees the very best in equipment performance, reliability and after sales support. A product that is designed and built to meet each customer's precise needs will always perform better in every application than a mass produced off the shelf equivalent.

Variations available for all applications such as conveyor, pipeline, gravity feed, textile, underbelt, pharmaceutical and so on.

Options include:

- Stainless steel construction
- IP67 upgrade for heavy duty wash down applications
- Remote controls
- Management software
- Additional d.c. power supply for heavy duty rejection systems
